

Thank You for Visiting Our Stand at ITMA ASIA 2018 in Shanghai!

We would like to thank all of our customers and new friends for their participation in this event. Without all your support the show would not have been such a great success. We didn't expect to receive so many positive reactions to this show because the global economy is in a slump. However, during the show, we had the opportunity to meet a lot of people from all over the world and were impressed by the great interest in our solution, Evergreen 900 especially, the sampling loom for 900 mm width fabric. CCI hopes you enjoyed the exhibition, and looks forward to seeing you soon in Barcelona, ITMA 2019!

Easy-to-use Jacquard Fabric Solution

For studios which need to make fabric sample but don't have production facility, the conventional jacquard weaving machine is not a suitable choice for them. The machine is very difficult to change warp density and very time-consuming to produce sample. Besides, its specific ceiling height requirement and considerable installation cost are not economical for these users with limited space. They are quite different from weaving factory which usually owns several jacquard weaving machines, and each machine has already been set up with different warp densities to fully meet various weaving requirements, even fabric sampling request.

CCI's jacquard sampling loom, **Evergreen J**, is specially designed to meet demand for all types of jacquard fabric samples and product developments for users like educational institute, research institute, sampling workshop, design house, R&D dept of international firms and so on. In addition to sharing common features of standard sampling loom (Evergreen), **Evergreen J** comes with a total solution to save users' time and effort, and further solve their fabric production woes.

Besides, we offer two versions of solution as Jacquard Fabric and Jacquard Terry. See below for more features and benefits;

Downsized Dimensions & No Limitation on Gantry Height

The machine is driven by servo motor instead of traditional cardan shaft. This led to the result of no limitation on gantry height and more compact size which makes the machine ideal suited for all kinds of spaces.

Easy to Change Harness

As the result of the reduction in the machine height, the work of changing harness has become more easy and quicker. Save users a lot of time!

Double Comber Board

The machine adopts double comber board to support 2 kinds of most commonly used density. Operators can change density faster!

Works with Major Jacquard Machine

The machine can work with major electronic jacquard machine and allow complex patterns to be created quickly with ease.

Integrated Controller

The integrated interface combines controllers of jacquard machine and sampling loom. Users can benefit from highly efficient management and fast interconnectivity. Besides, a human machine interface is equipped to make operation more easy and user-friendly.

These benefits make **Evergreen J** the ideal jacquard loom specifically for designers and educational & research institutions. Produce fabric sample at fingertips!

Visit CCI at DTG 2019

From Jan 9th to 12th, CCI will be presenting at the 16th DTG (Dhaka Int'l Textile & Garment Machinery Exhibition) at the International Convention City Bashundhara in Dhaka, Bangladesh. During the exhibition, we will be showcasing the sampling solution including Evergreen 500 and Taroko. You can effortlessly make woven textile within hours without having to interrupt the production line of your factory or outsource to a textile manufacturer. Stop by booth no. 513 in hall 7 to experience the fabric sampling solutions and services CCI offers!

Holiday Schedule Chinese New Year: 2 ~ 11 Feb
