

# Leno Fabric Sampling

## *evergreen II* for Leno Fabric

### Sampling Loom for leno fabric

Leno weave fabric is an open weave piece of fabric which allows light and air to pass through freely. It provides a strong and stable material. The leno fabric is not only popular for making clothing and upholstery, also used frequently for reinforcing purpose in composite product, packaging material, building & construction material and more. To cater to the application in various areas, CCI presents Evergreen II using a special attachment. The machine is specifically made for suiting the complex production of leno woven fabric sample. Furthermore, equipped with CCI's computer-controlled technology, users are capable of setting different density and weaves more easily. The sampling loom can also be used for normal weaving.

Speed depends on material and weave structure.
